Configure Continuous Delivery

Continuous Delivery is not enabled for this app. Enable Continuous Delivery to automate builds, tests, and deployments through Delivery Pipeline, GitLab, and more.

Deploy your app

Getting started quickly

Configuring your app

To connect services and DevOps toolchains to your app:

1. Use the **Services** card to connect a service to your app. Select an existing service instance, or create a new one. [Learn more.](#)

2. If you want to view the code before your app is deployed, click **Download code** to obtain the .zip file.

3. Click **Deploy your app** in the **Deployment Automation** card to select the deployment target and configure the Continuous Delivery service. The deployment begins automatically.

4. After the deployment begins, you can view the status of the deployment, modify

Hello Node-RED!

The screenshot shows the Node-RED web interface in a browser. The address bar displays the URL 'node-red-xgihj-2022-11-16.au-syd.mybluemix.net/red/#flow/25941d1487f7dc3b'. The interface has a black header with the 'Node-RED' logo and a green status bar indicating 'Successfully deployed'. On the left, there is a sidebar with a search bar and two categories of nodes: 'common' and 'function'. The 'common' category includes nodes like inject, debug, complete, catch, status, link in, link call, link out, and comment. The 'function' category includes function, switch, change, and range. The main workspace, titled 'Flow 1', shows a flow with two nodes: an 'inject' node with the text 'Hello Node-RED!' and a 'debug' node labeled 'msg.payload'. These two nodes are connected by a line. On the right side, there is a 'debug' console panel with a dropdown menu set to 'all nodes' and a 'all' button. The console area is currently empty.
